**Enhancement Requests--MARKETS**

| Enhancement ID# | Enhancement Description   | Requesting Party | Priority Grouping | Cost Estimate | Comments   | Commenting Party                              | Resolution  |
|-----------------|---|------------------|-------------------|---------------|--|---|---|
| 02 - 5352       | Request to add Total MWs to all pages in the UI containing 24 hours of MW data. This includes both submitted and result data pages. |                  | Unplanned C       | \$10k - 25k   | Can we have more information on this enhancement request? It is not clear from the enhancement description how the usability of the MUI will be impacted by this request. The MUI windows are already extremely cumbersome to navigate. Our concern is that adding additional information may make this problem worse. | Southwestern Public Service Company (SPSM-MP) | SPP staff states that this request was made by a member to add total MWs to the bottom of each column on displays where the display contains 24 hour worth of MW data. This enhancement request has not yet been associated with a future markets release and therefore design discussions have not occurred. Please provide any input you wish to be taken into consideration for this enhancement and when design discussions begin using the Stakeholder Prioritization process concerning this enhancement. |

**Enhancement Requests--PUBLIC DATA**

| 02 - 4836       | Price Contour Map - Weather and Transmission overlay | OGE              | Release +1        | Up to \$10k   | The enhancement of the Price Contour Map will bring extensive value to MPs when enhanced with weather radar showing multiple configurable layers (e.g. radar, wind concentration levels, cloud cover [important as more solar enters market]). The installed current transmission map overlay is also very important in helping MPs see where resources and binding constraints impact prices as the footprint seeks to serve load. This enhancement must be configurable with the ability of the user to select which layers they desire to display (similar to the current selection capability for DA or RTMB). | Oklahoma Gas & Electric - Generation (OGE) | SPP staff is currently planning to implement the "transmission overlay" enhancement per this request as part of public data release 1.19 with the expectation that it will be worked on during Q2 with target production in July 2017. |
