

2021 ITP – Updates to Final Load Review

- **Action Required**

The final 2021 Integrated Transmission Planning Assessment (ITP) Load Review workbook has been updated and posted to [GlobalScape](#). In the previously approved load review workbook, the peak load values included ~310 MW of out-of-service loads and load on out-of-service buses. SPP staff is posting for stakeholder awareness, review, and approval of the updated load review data. This change in load does not result in a material change in the Renewable Policy Review and Resource Plan – Phase 1 (RP1), so this data will be used as inputs for the 2021 ITP Resource Plan – Phase 2 (RP2) and the Market Economic Models. Additional data submissions will be considered under [ITP Manual](#) Section 10.3.

SPP staff will be requesting ESWG approval of the updated final 2021 ITP Load Review via email on May 22, 2020.

- **Entities Required to Provide Feedback:**

All interested stakeholders, primarily ESWG, TWG, and MDWG members

- **Due Date and Method of Submittal**

Please review the posted files prior to **Friday, May 22, 2020**. If there are questions or concerns please submit them through [RMS](#) under the “ITP-Data Submissions” Quick Pick.

- **Changes from Last Pass**

The latest load review excludes loads that are out-of-service or connected to an out-of-service bus. This results in a change in the peak loads of the following:

- Grand River Dam Authority*
- East Texas Electric Cooperative
- Public Service Company of Oklahoma
- Southwestern Electric Power Company

* The majority of the reporting error affected Grand River Dam Authority. Since GRDA does not have an RP2 reserve margin shortfall, this is not impactful to the RP2 results seen up to this point.
