

2023 ITP Resource Addition Request (RAR) and Waiver Application

- **Action Required**

SPP Staff is requesting information on prospective generation through the ITP Manual RAR and waiver process via applications for the 2023 ITP study. If a resource has not already been identified in the 2023 ITP Generation Review, but meets inclusion criteria (see below), please submit a RAR and Waiver Application to SPP Staff via the [SPP Request Management System \(RMS\)](#) by **Friday, October 22, 2021**. Depending on the criteria met, these resources could potentially be included in the 2023 ITP base reliability models (waiver) and/or the 2023 ITP market models (RAR) upon review and approval.

Generation Resource Inclusion Guidelines:

Waiver:

Generation resources and associated transmission service requests that have a high probability of going into service or obtaining an effective transmission service agreement can be included in the base reliability model although the requests have not fully completed the processes defined in Attachment V and Z1 of the SPP Tariff. Requirements for these resources are outlined in Section 2.1.1.1 of the [ITP Manual](#).

Generation resources not meeting the requirements in Section 2.1.1.1 of the ITP Manual can be submitted to the TWG for approval via a formal request for resource inclusion in the base reliability model. The information the TWG will consider for inclusion in the reliability models is also outlined in Section 2.1.1.1 of the ITP Manual.

RAR:

Generation resources in the base reliability models will also be included in the market models, as appropriate. In addition to these resources, generation interconnection resources and associated network upgrades will be included if meeting all of the requirements listed in Section 2.2.1.4 in the ITP Manual. Refer to Section 2.2.1.4 in the ITP Manual regarding Resources identified by SPP as necessary to solve the base reliability model.

Generation resources not meeting the requirements in Section 2.2.1.4 in the ITP Manual can submit request for generation capacity to the ESWG, and TWG if applicable, for consideration of approval on a case-by-case basis. The minimum information the ESWG will consider for inclusion in the market models is also outlined in Section 2.2.1.4 in the ITP Manual.

Please note it is the responsibility of the waiver/RAR submitter to provide and present the appropriate justification to the TWG and/or ESWG for their approval during official meeting times. The TWG meeting will be held November 1st-2nd, followed by the ESWG on November 3rd-4th. Applications that are not approved by the TWG may still be presented to the ESWG for inclusion in the 2023 ITP market models. Meeting materials will be due to SPP for staff and stakeholder review on October 22, 2021. If a submitter provides an application, but no meeting materials, the request may not be considered.

It is also the submitter's responsibility to provide modeling data in agreement with the SPP MDWG [Model Development Procedure Manual](#) within lessor of 120 days after the GIA is fully executed or the current model build schedule deadline (November 26, 2021) for generator additions. A formal request of this data will be sent once SPP reviews the RAR and Waiver Application. If the modeling data is not provided by the

deadline, SPP will utilize the generator information SPP Generator Interconnection has for the respective resource.

- **Entities Required to Provide Feedback**

All interested stakeholders

- **Due Date and Method of Submittal**

Please submit all RAR and waiver requests and meeting materials to SPP Staff by **Friday, October 22, 2021** via the SPP Request Management System (**RMS**) under the “ITP-Data Submission” Quick Pick.
