

SPP Market Roadmap Process

Initiative #39 Submitting zero for resources on outage

Presentation by:

Richard Owen Jr., OG&E Supervisor Market Operations

What is Initiative #39 proposing

- Proposal –This initiative resolves resources submitting megawatt values greater than zero while a resource is being offer as Outage.
- Purpose - The purpose of this initiative is to improve Marketplace efficiency by providing clear offer data to the RTO. In today’s Marketplace resources can submit megawatt values for resources that are on Outage even though the resource cannot operate.
- Problem –This can be confusing to the RTO as well as the MP. For increased market clarity the Market rules and software logic must disallow megawatt values greater than zero when a resource is submitting zero. Not only will this improve clarity to the RTO but additionally it will prevent MPs from submitting values and believe that a resource is being offering into the Market while the resource remains on Outage in the CROW system.

Potential Impacts – SPP Assessment

- **Potential System / Process Impacts**
 - API/MUI, MDB, MOI, Settlements, Additional FTEs
- **Potential MCE Performance Impact**
 - None
- **Potential Complexity**
 - Design: Medium
 - Implementation: Medium
- **Market Philosophy Impacts:**
 - Market Transparency

Questions?

Thank you!
